

Setting up OS8 Dialup

OS8 is a great Mac system and the Internet software is very simple to configure. As we go through the setup you're going to need to configure **PPP** and **TCP/IP**.

Your first step is to open the TCP/IP control panel. (Control panels are found in the apple menu). Make it look like this:

Great. That was easy. Now let's move on to the PPP control panel, also found in the apple menu. Add your username and password in the fields below along with the phone number shown. Usernames and passwords are case sensitive so be sure you aren't using capital letters!

Great. Now, to log in, all you need to do is hit "connect".
Once connected your PPP should look like this.

Connect via: Modem

Connection

Registered User Guest

? Options... Disconnect

What Now?

You're ready to go. Once you're online you can use all your Internet programs like [Netscape](#), [Eudora](#), and [Internet Explorer](#). Information on these is contained on our website at <http://www.LABridge.com/> - you can type this in the location window in either Netscape or Internet Explorer. For help on setting up e-mail and news you can visit our users section at <http://www.LABridge.com/site/pages/configure/my/computer.html>
